ANTIBACTERIAL

Quali sono gli additivi antibatterici utilizzati nei prodotti?

Una delle principali fonti di infezioni per l'uomo è la contaminazione batterica. In determinate condizioni ambientali, i batteri sono in grado di proliferare in modo esponenziale, formando grandi colonie e producendo situazioni malsane per l'uomo.

Per garantire un ambiente igienico è importante controllare la crescita microbica. Ecco perché oggi sono sempre più richiesti prodotti con trattamenti antibatterici, rivolti ad ambienti in cui l'igiene è particolarmente importante: negli ambienti pubblici come i trasporti, nel campo dell'istruzione, o per la uso personale come articoli di uso quotidiano, sono i settori in cui iniziano ad avere una rilevanza crescente.

I prodotti con trattamenti antibatterici sono in grado di ridurre drasticamente le cariche batteriche presenti sulle superfici dei materiali, grazie all'incorporazione di agenti microbici permanenti statici, altamente efficaci nell'inibire e prevenire la contaminazione batterica.

Gli standard ISO 22196 e ISO 20743 determinano l'attività antibatterica rispettivamente su materiali plastici e superfici non porose e su prodotti tessili. Queste analisi permettono di conoscere l'efficacia dell'inibizione microbica che gli additivi hanno sugli oggetti trattati attraverso una valutazione quantitativa.
